

Pet food that's health food!

What is K-9?

K-9 pet food was designed in accordance with the principles of holistic nutrition in mind. It is a ready cooked, frozen pet food that merely needs to be defrosted and served. It is a completely natural and wholesome way of feeding: this being the key to a healthy pet. K-9 is nutritionally balanced, meets all the requirements of a natural diet, with exceptional palatability.

Why feed K-9?

K-9 most closely resembles the way animals used to feed in the wild. That is, at the kill, the first part that is consumed is the paunch contents and the liver. It is uninteresting for pets to only eat dry, processed foods. These foods have become merely a convenience for the pet owner without taking the pet's enjoyment into consideration and have, effectively, taken out the excitement of eating palatable food.

What does it contain?

The different products typically consist of pure meat, fresh vegetables, rice, bran, garlic, bonemeal, vitamins and minerals, and macaroni in the 1kg packets. The reason for feeding macaroni to larger dogs is that it is an excellent source of carbohydrate and fibre.

What about Preservatives and other additives?

No preservatives, by-products (hooves, feathers, bones offal, fish meal, cornmeal, other "fillers", nor artificial flavourings are added. All ingredients are completely natural.

How is your pet's health enhanced?

K-9 is a complete meal that requires no supplementation. It is scientifically balanced, with the stringent minimum and maximum requirements required by the Veterinary Act, closely monitored. As a result of the quality of the raw materials, the food is easily digested and absorbed. This means reduced waste, beautiful shiny coats, no "runny tummies," ideal weight and healthy strong bones and teeth. The nutritional value, quality and palatability far surpasses anything your pet has experienced

before. We make no claims as to our product being medicinal, but in fact this has proven to be the case, largely due to the high quality of the food, the manner of cooking, the pureness and freshness of the ingredients and the fact that nothing artificial is added.

What flavours are available?

There are 9 various flavours, namely: Beef, Turkey, Steak & Kidney, Lamb's Liver, Hake, Ostrich, Chicken Liver, Clean Tripe and Chicken & Rice.

Are there special diets?

Yes, besides the various 'everyday' meals, there are special dietary combinations available. These are especially for puppies, kittens, low fat diets, fussy dogs & cats, 'vegetarian' pets, convalescing pets, and those with pancreas problems.

At What age can K-9 be fed?

K-9 is ideal for all ages, ranging from puppies & kittens, to young adults to 'old friends'.
